Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach nor suggest elements of the claims substantially as argued by Applicants. That is, in the closest art Atsatt, the Slip_R is implemented in a PZT table which is not explicitly stated as defining the replacement area; rather, Slip_R defines a cumulative count of slipped sectors. Examiner does not agree with the statement that these sectors are not useable as replacement area, since the slipped sectors include spare sectors and defective sectors, and the purpose of spare sectors is that they be used as replacement area for future user data defective sectors. However, the claims require the parameter to define the replacement area, which requires the parameter to identify areas available for replacing data; as in Atsatt the defective sectors may not be included in that area since they are not available for replacing data. Atsatt does not show a parameter that identifies or defines only the available spare areas. It is also clear that Atsatt does not explicitly describe a value for Slip_R that defines a null region. It is further noted that a parameter LBA_R and Slip_R of Atsatt applies individually to each sparing region. In the claimed invention, a single user area parameter and replacement area parameter have values selected to determine or define appropriate defect management, either to determine a particular sparing configuration or for a particular use of the media; no single LBA_R and Slip_R combination in Atsatt may be fairly said to meet this limitation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
